

**IN THE SPECIFICATION:**

Please amend paragraph 41 as follows:

A smart modular wireless device may consist of a cartridge 2 and a shell 1. The cartridge 2 may consist of wireless components such as baseband 9, RF 10, and call-processing software 11 (see prior art drawings). The shell 1 may consist of non-wireless components such as keypad 13, display 5, battery 6, speaker 4, and microphone 14. The cartridge and shell components may be located on the same circuit board 3. Alternatively, the cartridge 2 may be in the form of a wireless module or a cartridge 2 configured for removable connection to the shell 1. The cartridge 2 may further include an antenna 12.  
The shell 1 may further include a microprocessor 8 and system software 7.
